

MetaLite Amalga 80/293

Standard metal decking sheets with an 80/293 profile, used as load-bearing elements for supporting concrete in floor systems of all types of buildings

Available in

Effective cover width 880mm | Nominal thickness from 0,80mm, 1,00mm, 1,25mm and 1,50mm

Bespoke lengths up to 14 m, depending on project requirements

Shear Studs

For the anchoring of composite slabs (metal deck with concrete), the use of composite construction studs is recommended. Small indentations on the smooth surface of the metal formwork increase adhesion, but are not sufficient. It is recommended to use studs that are certified and do not require heavy and expensive on-site equipment. For a 80/293 metal deck, a stud with H = 105 mm is recommended.

Technical Characteristics

Section	M.M.	80/293
Effective width	mm	760
Development	mm	1250
Weight /m* 0,80	Kg/m	7,85
Weight /m* 1,00	Kg/m	9,81
Weight /m* 1,25	Kg/m	12,27
Weight /m* 1,50	Kg/m	14,72

Weight per running metre is calculated based on:

- Steel density 7850 kg/m³
- Leakage limit 320 MPa

Dimensional Tolerances

(according to the standard EN 14509)

Steel sheet with galvanised coating, thickness > 0.6 mm

Aluminium sheet, thickness > 0.7 mm

Stainless steel sheet, thickness > 0.7 mm

		Trapezoidal sheets without ribs	Trapezoidal sheets with ribs

Ultimate Limit State (ULS): According to Eurocode 3 (Standards EN 1993-1-3 and EN 1993-1-5)

Serviceability Limit State (SLS): Safety factor for permanent and variable loads: $G + Q = 1.00$

Maximum allowable deflection per span: $L/200$ for $G + Q$ $L/250$ for Q only, where L = span length

Ultimate Limit State (ULS) Safety Factor: $S = 1.1$ for loading of $1.35 G + 1.50 Q$
